

# Product overview

for SIMATIC S7-1200

### Basic Controller SIMATIC S7-1200

#### Flexibly adaptable to your requirements

SIMATIC S7-1200 controllers are the intelligent choice for compact automation solutions with integrated I/Os, communication and technology functions for automation tasks in the low to medium performance range. They are available in standard and fail-safe versions.

<https://www.siemens.com/s7-1200>

#### System overview

The scalable SIMATIC S7-1200 controllers have integrated inputs and outputs as well as communication options and are modularly expandable. Digital and analog input and output modules as well as a wide variety of communication modules enable flexible adaptation to the respective automation task. With integrated technologies such as high-speed counters, pulse width modulation, pulse sequence outputs, speed control and positioning, SIMATIC S7-1200 controllers are suitable for temperature control, pump and fan control, conveyor technology and even packaging machines.

#### Efficient engineering

- The seamless integration of the SIMATIC controllers into the common engineering framework TIA Portal provides consistent data management, the smart library concept and a uniform operating philosophy. This makes it especially easy to use system-spanning functions.

#### Manifold diagnostics

- Efficient error analysis and fast error localization with the new uniform display concept – plain text information of the error message in TIA Portal, on the HMI and in the Web server – shortens commissioning times and minimizes production downtimes. SIMATIC S7-1200 offers you diagnostic functionality already integrated in the system without additional programming work.

#### Innovative design

- The SIMATIC S7-1200 Basic Controller can be perfectly adapted to the respective automation task by implementing a wide range of expansion options. The modular board concept allows the controller to be easily expanded without changing its physical size. Devices can be easily replaced without rewiring by employing terminal strips.

#### Safety Integrated

- Fail-safe automation is as easy to program as standard automation, and PROFIsafe devices are connected via PROFINET.

#### Technology Integrated

- Simple Motion Control applications, fast counting and measuring tasks, and closed-loop control (PID) are possible without special expansion modules.

#### Security Integrated

- Secure communication, know-how protection, copy protection and access protection prevent manipulation, opening and duplication of blocks by unauthorized persons, thus protecting your algorithm or process.

#### Five steps to the right controller:

Type of structure, system performance, programming, Motion Control, system architecture: Do you already know which functions and performance features your controller should have? Then our function check will take you directly to the right SIMATIC controller in five steps.
